

POOL OPENING

CHEMICAL TREATMENT

Pool Opening Chemical Treatment

For Chlorine (including Salt and Nature II) and Bromine Sanitation Systems

<p>Day 1</p>	<p>a) Add Stain and Scale Control (100 mL per 10,000 L of pool water) by slowly pouring it around the perimeter of the pool water. Wait 1 hour to let it circulate.</p> <p>b) Shock the pool with non-chlorine based Oxidizer (1 kg per 75,000 L of pool water) and then wait 3 hours.</p> <p>c) Balance the pool water to:</p> <ul style="list-style-type: none"> • pH: 7.2 – 7.6 • Calcium hardness: 200 – 350 ppm • Total alkalinity: 80 – 120 <p>If applicable, install your Nature II cartridge. Note: You must replace the Nature II Cartridge at the start of each season.</p> <p>d) Establish the recommended sanitizing level by applying an unstabilized granular or liquid chlorine</p> <p>Add HTH Extra: broadcast 65g per 10,000 L. Test after 10 minutes, and if levels are below 1.0 ppm, repeat until 1.0 ppm is obtained.</p> <p>OR Add Unstabilized Liquid Chlorine: add 1 L of liquid chlorine per 10,000 L of pool water. Test after 10 minutes: if levels are below 1.0 ppm, repeat until 1.0 ppm is obtained.</p>
<p>Day 2</p>	<p>a) Add 40% Algaecide (100 mL per 10,000 L of pool water) by slowly pouring it around the perimeter of the pool water. Wait 1 hour to let it circulate.</p> <p>b) Start up the chemical feeder on its medium setting. Wait 24 hours, then test your water and adjust chemical feeder output as necessary.</p>

For Nature II Pools: Circulate the pool 24 hours for the first 4 days with a chlorine level over 1 ppm. After 4 days, allow the chlorine level to drop to 0.6 ppm. After this, your pool should circulate for no more than 12 hours a day.

For Bromine Pools: Once your pool water is balanced, start up the automatic brominating system. You will need to dissolve 25 grams of bromine per 10,000 L of water per day for proper sanitation to be achieved.
