Select Cover Type: ☐ Mesh ☐ Solid

Specify Cover Colour*:

*Selection Varies by Cover Type

Round Pool Measurements

D:
Additional Requirements:

There must be 3'0" or more of concrete around the pool itself. (*) Decking with a securing type requires brass anchors (concrete, mortared interlock or flagstone.) If the ground is loose and not a securing type it will require lawn tubes (dirt, interlock. Loose rock.) If the decking happens to be wood, you will require wood brass anchors (useable only if the decking is in good shape and true lumber, no imitation wood products.)

There must be no obstructions within the 3'0" of the pool's edge (*): Waterfall, dive rocks, slides or any non-removable items. Removable items such as steps and ladders are allowed.

*: If these conditions are not met please contact before proceeding with an order. Covers requiring more custom specifications (less than 3'0" of concrete around pool, obstructions on pool, etc.) will need to refer to the A-B Triangulation process or you can speak with a safety cover specialist on the matter as all sales are final. **Important: Cover colours vary by cover type, see online for colour options**
