

Attaching your above ground Eliminator Winter Cover to a Deck

You will close your pool putting in the appropriate chemicals and allow time to circulate as you have done in the past (visit your local pool dealer for more information). Instead of dropping down your water below the return, we have provided a threaded plug for you to plug your return. Also included is a Styrofoam dam to insert into your skimmer. Refer to installation and DVD for instructions.

The above ground Eliminator cover is designed to attach to the uprights, however if there is not enough distance between your deck and pool then we would recommend it be installed more as an in-ground cover. **All sharp edges must be covered.** This will work with most installations but each installation is unique.

✓ The bungees are to be installed horizontally every 2 ½' apart. The bungees must still have some stretch in them so that when the weight of the snow rests on the cover, it doesn't put tension on the cover that may cause the seam to tear.

✗ Bungees MUST NOT be doubled up! There needs to be stretch in the bungees to allow the weight of the snow to move cover to water level.
✗ On a deck installation it is NOT recommended to attach the bungee in a 'V' formation because there is too much tension and not enough stretch.
