

NorthFlo Salt System

Step into

New generation salt system for pool

2 years

warranty on the cell

Automatic Stop

with the flow switch

Boost Mode

for a 24 hour super chlorination

Product features

Why Salt?

Pool maintenance is easy! The salt system is more ecological, safer and offers a completely independent solution to maintain the quality of your pool water. Salt (NaCl) is composed of two molecules: Sodium (Na) and Chlorine (Cl). Electrolysis creates chlorine, which is available to eliminate bacteria, algae and other unwanted particles. The sodium gives your water a salty taste and keeps it softer for your eyes.

Automatic Stop

The system automatically stops its production of chlorine when there is no flow detected. This increases the life of the cell and the infrastructure.

Boost Mode

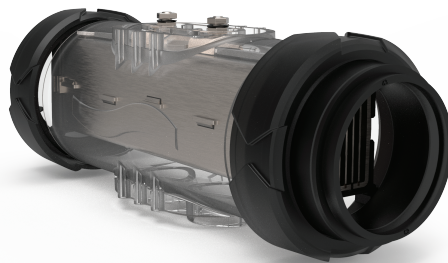

Superchlorination with automatic stop that allows you to increase production capacity to 100% for 24 hours.

Hybrid Mode

Whether you prefer to operate in Normal Salt (3000 ppm) or Low Salt (1500 ppm), the NorthFlo Salt System is a hybrid system that allows you to operate in both settings.

Warranty

The NorthFlo Salt System comes with a 2 years warranty on the cell and the system.

NorthFlo Salt System	PSNF15MINI	PSNF25MINI	PSNF40MINI
Recommended volume NS (Liter/Gallon)	50 000/15 000	85 000/25 000	140 000/40 000
