AQUA/LAMP® Pool Light System

Systems with one or two lights

Choose the system that suits your pool and lifestyle

The one pool light system is ideal for smaller pools and is placed in the deep end to illuminate the full pool length. On larger and irregular shaped pools, the two light system provides even more light throughout the overall pool. Whatever system you choose, you will enjoy your pool more with its dramatic effects.

Quality Low Voltage System

AQUA/LAMP® pool light systems have been engineered with pool safety in mind. The lights meet Canadian and U.S. electrical standards and are powered by a low 12 volt system with GFCI ground fault breaker protection. No additional grounding is required.

Safety

Lighting your pool at night not only extends your pool usage time, but it provides greater safety as well. The AQUA/LAMP® pool light system will enhance the visual appeal of your night time pool environment while creating visibility in every corner for that added security.

AQUA/LAMP® Wireless Remote Control

AQUA/LAMP® wireless remote control units can be used to turn your pool light(s) on or off for added convenience. The wireless remote control can be easily added to all existing AQUA/LAMP® pool light systems.

Color Choice... Available in white or grey.
